

📷 Macro AI Prompting Framework

If you want insane detail in your AI macro shots, don't just type "macro photo." Here's the framework to follow:

1. Choose a Lens

AI responds better when you name real lenses. Examples:

Canon RF 100mm f/2.8L Macro

Sony 90mm f/2.8 Macro G OSS

2. Set the Aperture (f-stop)

f/2.8–f/4 → Shallow depth of field, dreamy blur.

f/8–f/11 → More detail, sharper textures.

3. Shutter Speed (Optional but Powerful)

Fast (1/250+) → Ultra-crisp, freezes detail.

Slow (1/60–1/125) → Softer light, more glow.

4. Add Lighting Direction

Don't forget light—it changes everything.

Softbox lighting for even smooth textures.

Side light for drama & contrast.

Ring light for that sharp commercial pop.

Backlit sunlight for glowing membranes/liquids.

5. Tell AI What to Focus On

This is where the magic happens—be ultra specific:

"sharp focus on grape skin pores"

"pomegranate jewels glistening with juice"

"soap film ripples in rainbow hues"

"mushroom gills under extreme close-up"

6. Aspect Ratio

For reels, wide looks cinematic:

--ar 5:2

7. Push Beyond the Obvious

Macro isn't just flowers & bugs. Try:

Goosebumps

Coral textures

Melted chocolate swirls

Rust on metal

Fabric threads

✅ Quick Example Prompt

"Extreme macro of soap film ripples, Canon RF 100mm f/2.8L Macro, f/2.8, side lighting, sharp focus on membrane detail, ultra-realistic texture, cinematic depth of field --ar 5:2"
